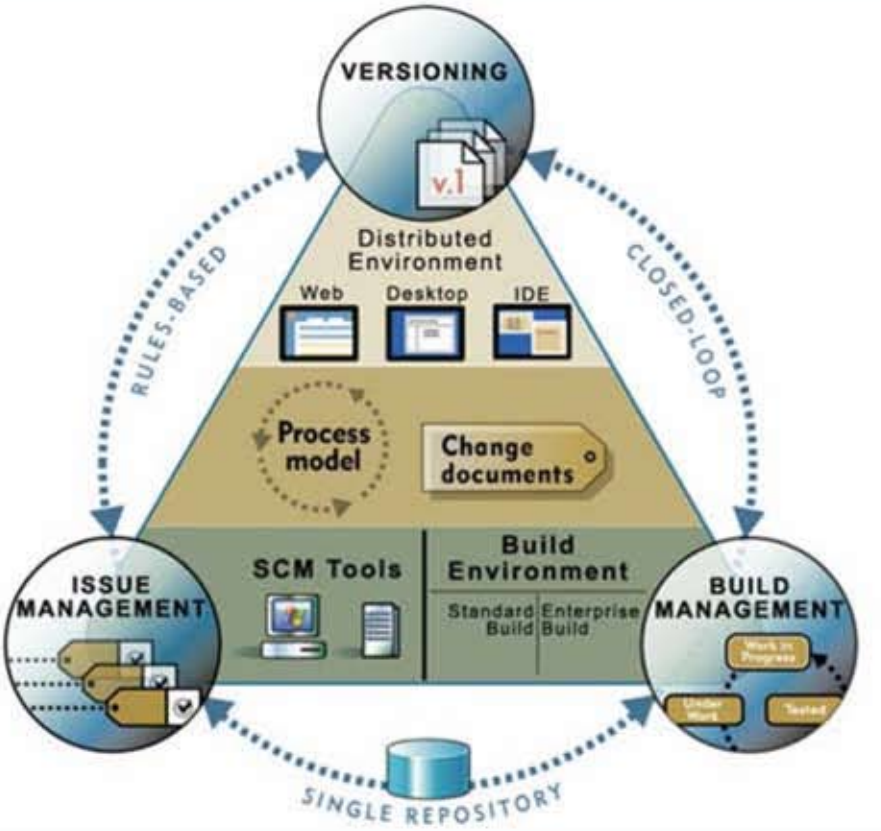
Enterprise Configuration Management® (ECM)

CMI

Managing the Business of IT

Technology Solutions • Consulting Solutions • Outsourcing Solutions • Staffing Solutions



Configuration Management, Inc. (CMI) is all about managing the business of IT. We are a leading provider of technology services, and have been supporting critical IT initiatives for Fortune 500 companies for 20 years including the design, development, systems integration, testing and operational support of application development platforms and systems.

Enterprise Configuration Management® (ECM) is an engineering management discipline that focuses on establishing and maintaining consistency of a system's or product's functional and physical attributes including its requirements, design, and operational information throughout the systems and/or product's lifecycle.

CMI's Enterprise Configuration Management® solutions improve the efficiency and quality of your solutions delivery. Throughout your project's lifecycle, we ensure the integrity and control of all approved changes through the use of standardized, best practice configuration management framework processes, procedures, and tools. We accelerate organizational maturity at all levels with proven techniques that are guaranteed to improve your solutions. Minimize risks and improve quality and control of your IT assets with our ECM services!

BENEFITS OF WORKING WITH CMI

Our Focus:

- We've been supporting critical IT initiatives for Fortune 500 companies for 20 years.
- Our services leverage business knowledge, process excellence, and technology expertise in various industry verticals.
- We enable you to maximize business value from your IT investments leading to improved organization performance, increased ROI, and lessen your time to market.

Our Core Areas of Expertise:

- Enterprise Configuration Management
- Application Lifecycle Management
- Infrastructure Management
- IT Consulting, Outsourcing & Managed Services
- Staff Augmentation & Professional IT Staffing

APPLICATION LIFECYCLE MANAGEMENT (ALM) ASSESSMENT

An ALM assessment analyzes the processes around your systems and/or software development controls. We assess the strengths and weaknesses of your current process as compared to industry best practices. Specific areas of focus include Source Code Management, Change Management, Build Management, and Release Management. We will generate a Findings & Recommendations report that describes the gaps between your current process state and your recommended future process state.

PRACTICE FRAMEWORK

CMI's Practice Framework supports industry accepted standards and frameworks including IEEE, ITIL, COBIT, and CMMI. It acts in multiple capacities, from process maturity guidance to practice training materials and tool design materials for automation. Our Practice Framework implementations support geographically dispersed software development and testing teams conducting parallel software development.

CM TOOL SELECTION

Our CM tool selection process uses objective, weighted criteria for tool comparisons based on our extensive experience and knowledge. A tool agnostic analysis and recommendation ensures the right tool for your particular environment. The selection process considers the following areas: Requirements Management, Version Control, Change Management, Build and Release, and Software Testing.

TOOL IMPLEMENTATION & SUPPORT

We employ a disciplined approach to successful tool implementation that is seamless and non-intrusive. You'll receive time estimates, architecture plans, training documentation, and automation/integration plans. We also offer a "Rapid Release" program for customers who choose to implement out-of-box functionality of a given CM tool.

BUILD AUTOMATION & SUPPORT

For many organizations, the task of "running the build" can be extremely labor intensive and time-consuming. We have build specialists and offer managed services for build support that utilizes the right resources at the right levels to deliver cost savings to you while improving your speed and accuracy of the requested builds.

RELEASE MANAGEMENT

Increase the timeliness, reproducibility, and reliability of your deployed applications with CMI's Release Management services. Our experts can support the release automation of your application deployment process and efficiently manage the complex and changing dependencies from start to finish.

PROGRAM & PROJECT MANAGEMENT

Improve your software development lifecycle by addressing critical success factors with project planning and program management. We provide detailed project planning for every phase of your program and tailor it to suit each project's specific requirements.

QUALITY ASSURANCE & TESTING

Achieve quality assurance through testing and process engineering. CMI ensures that QA is planned effectively through functionality, performance, regression and automation testing. We can also help your company achieve its regulatory requirements in ways that accelerate your team's productivity rather than impeding it.
